

TRUCK WASH

DIRECTIONS

For best results, wash all vehicles in a protected or shaded area – not in the hot sun. For normal cleaning, dilute 40:1 for use through standard pressure washing equipment. Severe soiling, road tar, salt residue or heavy exhaust soot may require stronger solutions or agitation.

The detergent solution may be sprayed, mopped or sponged onto wet vehicle surfaces. Allow to penetrate for several minutes, then rinse the clean surface thoroughly with water.

To avoid streaking, always wash vehicles by starting on the lower soiled parts and moving upward to the higher sections.
